Talecris Plasma Resources Supplements Its Collection: Acquisition Adds New Centers

Deal Includes Three Centers Currently Open in Las Vegas, Nevada; Montgomery, Alabama; and Rockford, Illinois with Plans to Open Up to 10 Additional Centers

RESEARCH TRIANGLE PARK, N.C. (June 12, 2007) — Talecris Biotherapeutics, Inc. announced today that its wholly owned subsidiary, Talecris Plasma Resources (<http://www.talecrisplasma.com>), has entered into a deal with International BioResources, LLC (IBR) to purchase three plasma collection centers and open up to 10 additional centers to further supply Talecris Biotherapeutics. The three centers purchased by Talecris are located in Las Vegas, Nevada; Montgomery, Alabama; and Rockford, Illinois. Of these centers, the Las Vegas center is licensed and the other two are operating and awaiting FDA approval for licensure. Additionally, under the terms of the agreement IBR will be responsible for building up to 10 new centers to Talecris' specifications; Talecris Plasma Resources will have the option to purchase each of the centers opened. Financial terms of the deal were not disclosed.

The plasma donated at Talecris Plasma Resources provides the source material for the production of Talecris Biotherapeutics' critical care protein therapies, used in the treatment of life-threatening disorders in a variety of therapeutic areas, including immunology, pulmonology, and hemostasis. In November of 2006, Talecris acquired 58 plasma centers from IBR and launched Talecris Plasma Resources in an effort to further ensure the reliable supply and safety of its products.

“To meet the growing demand for critical care protein therapies, we have been implementing an aggressive expansion plan for Talecris Plasma Resources,” said Alberto Martinez, M.D., President and CEO of Talecris Biotherapeutics. “Since January 2007, we have opened eight plasma collection centers and have several more openings scheduled this year. This aggressive schedule combined with this most recent acquisition will advance our goal of ensuring the reliability of our products from the arms of plasma donors to the arms of patients.”
